

Finger Exercises Lecture 1

The questions below are due on Monday September 12, 2022; 03:00:00 PM.

1) Question 1 of 1

Assume 3 variables are already defined for you: `a`, `b`, and `c`. Create a variable called `total` that adds `a` and `b` then multiplies the result by `c`. Include a last line in your code to print the value: `print(total)`

```
1  # Write your code here

    total = (a + b) * c
    print(total)
```

You have infinitely many submissions remaining.

Here is the solution we wrote:

```
total = (a+b)*c
print(total)
```
